

Signalling & Telecoms Recruitment

Coyle Rail Division has a division dedicated to Signalling and Telecoms staff. We work in partnership with our clientele to supply to Network Rail, LUL and other Railway Infrastructure companies.

We have realised the shortage of skills and provide training to our candidates to develop their skills, giving our clients more skilled workers.

The majority of candidates we provide to the Rail industry work on a temporary or contract basis, as this allows greater flexibility and is more responsive to changing project requirements.

However, we also place a number of candidates into permanent roles, requiring high skill levels and industry experience.

Staff we supply
